605 Verde Real Brilh Ral6005	Cor1
510 Azul Brilhante Ral 5010	Cor 1
513 Azul Brilhante Ral 5013	Cor 1

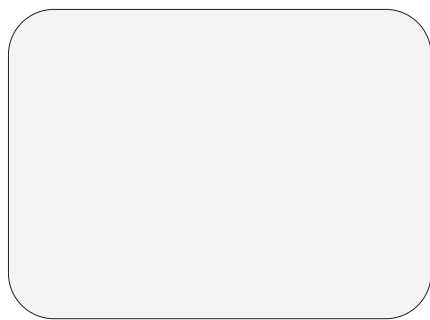

A lacagem é um processo de pintura com base em poliéster, termoendurecível. Compõe-se de um ciclo de pré-tratamento, por imersão, cujas principais finalidades são preparar os perfis para a pintura, protegê-los da corrosão e maximizar a adesão da tinta. Posteriormente, os perfis de alumínio darão entrada nas unidades de pintura onde as partículas de pó, carregadas de eletricidade estática, se depositam uniformemente nas superfícies dos perfis. Depois de transportados para o forno de polimerização, a temperatura fará com que se crie uma camada homogênea, de lacagem, nos perfis. Todo o processo decorre em condições de controlo, de acordo com a norma de qualidade QUALICOAT. Assim, são controlados os banhos de pré-tratamento, a temperatura de polimerização, verificadas as espessuras da camada de lacagem e a aderência da mesma, bem como a verificação da cor por comparação e brilho (Normas NP EN ISO).
